ASHIMIRWE Joseph Marie

Full-Stack Engineer

"I am a Full-Stack Software Engineer and Creative Lead dedicated to building digital products that are as structurally sound as they are visually compelling. With a deep mastery of the JavaScript ecosystem, I specialize in bridging the gap between complex backend system design and high-fidelity user experiences. My workflow is rooted in the belief that great software isn't just about code it's about the seamless integration of logic, aesthetics, and scalability. Core Objectives Architectural Excellence: Designing robust, scalable backend systems using Node.js, MySQL, and MongoDB to power data-driven applications. Design-to-Code Synergy: Leveraging Figma and Adobe Creative Suite to craft pixel-perfect UI/UX that transitions fluidly into React and Tailwind CSS. State-of-the-Art Deployment: Utilizing Firebase and Git-based workflows to ensure rapid, reliable, and secure application delivery. My Vision My mission is to redefine the "Full-Stack" standard by treating technical architecture and graphic design as a single, unified discipline. I aim to build systems that don't just function efficiently under heavy loads but also provide an intuitive, world-class experience for every user who interacts with them."

Experience

Deputy School Manager In Charge of Studies

Dec 2023 - Aug 2025

Saint Peter College of Shyogwe

- 1. Academic Leadership and Oversight:
- Oversee the implementation of the technical curricula in line with Rwanda's National Technical Education policies.
- Ensure that teaching and learning meet the quality standards prescribed by the Ministry of Education.
- 2. Curriculum Development and Alignment:
- Collaborate with curriculum developers and industry stakeholders to update and adapt technical training programs.
- Integrate Rwanda's National Technical Skills Development Strategy into the training programs.
- 3. Student Academic Support:
- Provide guidance and mentorship to students to enhance their technical skills and professional conduct.
- Monitor student progress and implement interventions to improve performance.
- 4. Faculty and Staff Supervision:
- Support the professional development of teachers and technical instructors.
- Supervise teaching staff to ensure effective delivery of the curriculum.
- 5. Assessment and Quality Assurance:
- Coordinate assessments, examinations, and certification processes in accordance with Rwanda's national standards.
- Ensure proper record-keeping and reporting of student achievements.
- 6. Industry and Community Engagement:
- Foster partnerships with local industries, businesses, and government agencies to ensure relevance of training.
- Facilitate internships, apprenticeships, and practical training opportunities for students.
- 7. Resource and Program Management:
- Manage educational resources, laboratories, and workshop facilities.
- Coordinate scheduling of classes and practical sessions.
- 8. Compliance and Accreditation:
- Ensure the school complies with national regulations and standards set by the Rwanda Education Board.
- Assist in accreditation processes and maintaining quality standards.
- 9. Promoting Skills Development for National Development:
- Support Rwanda's Vision 2020 and the National Strategy for Technical, Vocational, and Education Training (TVET) by aligning programs with national development goals.

Trainer in Software Development

Sept 2025 - Present

Kageyo TSS

- 1. Curriculum Delivery:
- Design, plan, and deliver engaging lessons on programming languages (such as Python, Java, C++, etc.), software engineering, web development, mobile app development, and other relevant topics.
- Incorporate practical exercises, projects, and real-world scenarios to enhance student learning.
- 2. Practical Skills Development:
- Facilitate hands-on training through labs, workshops, and project-based assignments.
- Guide students in developing portfolios and software projects that demonstrate their skills.
- 3. Assessment and Evaluation:
- Develop and administer assessments to evaluate student progress and understanding.
- Provide constructive feedback to support student improvement.
- 4. Curriculum Development:
- Collaborate with the school's academic team to update and improve the software development curriculum in line with Rwanda's national standards and industry trends.
- Incorporate emerging technologies and tools relevant to Rwanda's digital development goals.
- 5. Industry Engagement:
- Establish and maintain partnerships with local tech companies and industry stakeholders.
- Facilitate internships, mentorship programs, and industry visits for students.
- 6. Student Mentorship and Support:
- Provide guidance and mentorship to students on career pathways in software development and related fields.
- Support students in preparing for certifications and industry exams.
- 7. Professional Development:
- Stay updated on the latest developments in software engineering, programming, and educational methodologies.
- Participate in training and workshops to enhance teaching skills and technical knowledge.
- 8. Administrative Responsibilities:
- Maintain accurate records of student attendance, progress, and assessments.
- Contribute to reporting and documentation required by the school and national authorities.

Full Stack Engineer

Since 2022 - Present

AJM Digital Solution

- 1. Design and Develop Front-End Applications:
- Build responsive and user-friendly interfaces using technologies like HTML, CSS, JavaScript, and frameworks such as React, TypeScript, Nextjs, or Vue.js.
- Ensure the application is accessible and performs well across different devices and browsers.
- 2. Develop and Maintain Back-End Services:
- Create server-side logic, APIs, and database interactions using languages like Node.js, Python, Java, or PHP.
- Implement RESTful or GraphQL APIs to enable communication between the front-end and back-end.
- 3. Database Management:
- Design, implement, and manage databases such as Firebase, MySQL, PostgreSQL, MongoDB, or others.
- Write efficient queries and optimize database performance.
- Integration and Deployment:
- Integrate third-party services and APIs as needed.
- Use tools like Docker, Jenkins, or CI/CD pipelines to automate testing, deployment, and scaling.
- Code Quality and Testing:
- Write clean, maintainable, and well-documented code.
- Conduct testing (unit, integration, end-to-end) to ensure application reliability.
- Collaborate with Cross-Functional Teams:
- Work closely with UI/UX designers, project managers, and other developers to deliver cohesive solutions.
- Participate in Agile/Scrum processes, including planning and stand-up meetings.
- Troubleshooting and Optimization:
- Debug and resolve issues in both front-end and back-end components.
- Optimize application performance and scalability.
- Security and Data Protection:
- Implement security best practices to protect applications from vulnerabilities.
- Manage authentication, authorization, and data privacy measures.
- Stay Updated with Technology Trends:
- Keep up with the latest developments in web development, frameworks, and tools.
- Continuously improve skills and adopt new technologies that enhance product quality.
